Claim Objections

Claims 8-11 are objected to because of the following informalities: Claims 8-11 depend from cancelled claims 1 and 2. Appropriate correction is required. Accordingly, the claims 8-11 have not been further treated on the merits.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 7 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Pat. No. 6,202,230 to Borders.

Claim 7, Borders discloses a leg support arrangement for an operating table with two leg supports (80,82), which leg supports are so connected with a base element 16 of an operating table that they are adjustable between a fundamental position in which they lie close to one another parallel to the longitudinal middle axis 36 of the operating table (fig. 6) and a spread position in which they have a spacing from the longitudinal middle axis (fig. 11), wherein each leg support is connected with the base element by means of a parallelogram joint whose joint axes (48,90,92) are oriented perpendicular to the plane of the base element, wherein each leg support includes an upper leg support 84 and a lower leg support 86 each of which is movable by a folding joint 48 about a horizontal axis relative to the base element and are pivotal relative to one another (fig. 8), that each upper leg support is connected with a connecting piece defined by the first

frame section 88 by two parallelogram joint forming links defined by a clevis 100, to which connecting piece the first ends of the links are pivotally connected (col. 7 lines 27-33) and which connecting piece is pivotally connected with the base element for movement about the folding axis for the upper leg support (col. 7 lines 40-42), and that the second ends of the links are pivotally connected to the upper leg support onto which the folding joint for the lower leg support is formed.
